

EINLADUNG

Kolloquium
Sommersemester 2023

Prof. Dr. Martin Wagner

Department of Biology, Norwegian University
of Science and Technology

hält am Dienstag, den **25.04.2023**, um 16:15 Uhr, im Biologicum, Max-von-Laue-Str. 13, Campus Riedberg, Hörsaal 1 einen Vortrag über,
„Plastic pollution: Impacts on biodiversity, health and society“

Plastic pollution is a global environmental issue with high priority for the public and policy makers. In my presentation, I will explore the impacts plastics have in aquatic biodiversity, human health and societies. Using examples from our recent research into the toxicity of microplastics and plastic chemicals as well as corresponding meta-analyses, I will highlight aspects that render plastics problematic for the environment and health.

I will spend the last part of my presentation to discuss the political dimension of plastic pollution based on my work at the science-policy interface, especially with regards to the global plastics treaty that is being negotiated at the moment.

Einladender: Prof. Dr. Dr. h. c. Henner Hollert
